

SNO SHIELD™

With **Color Armor™**

Sno Shield™ offers the only snow guards in the industry that have the ability to combine polycarbonate and metal together into one product. Our adaptable line of snow guards blends the functionality, reliability, and strength of polycarbonate with the appearance, attractiveness, and decorative appeal of metal. The versatility of our snow guards combined with the ability to customize to each roof results in a superior snow guard.

Panel Guard with Color Armor

Rib Guard with Color Armor

Snow Stops Here!

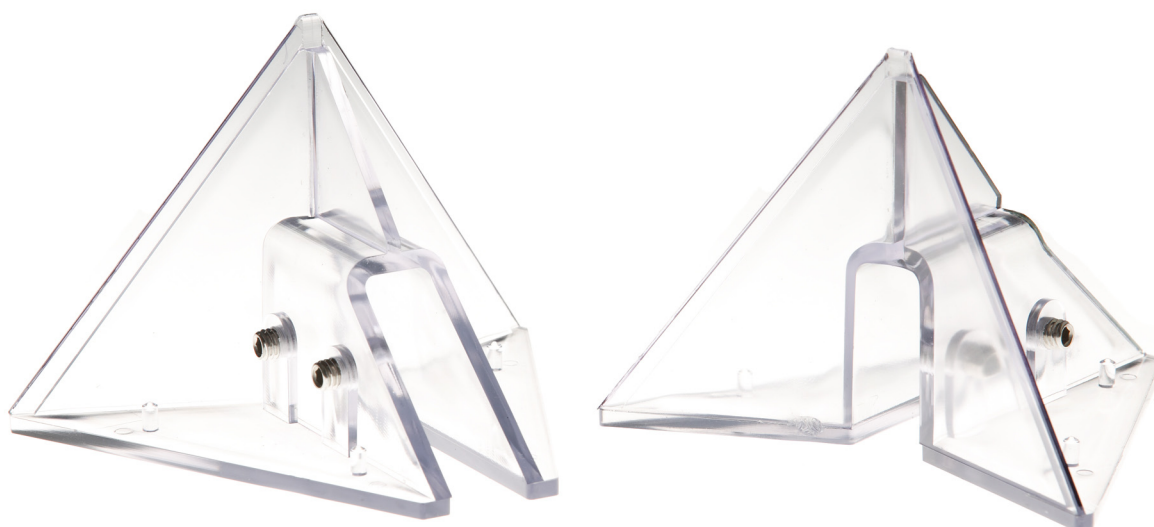

The unique design of the Panel Guard makes this snow guard attractive and functional. Built from tough, transparent polycarbonate, the Panel Guard blends in with any roof. The wide, Y-shaped base makes it very effective at stopping snow and the drain allows the snow to melt off naturally. The Sure Grip base enhances the bonding strength of the Panel Guard to ensure a stronger hold to the roof.

The Panel Guard

- Made from durable, virgin grade, UV stabilized polycarbonate
- Clear polycarbonate blends in with the roof
- Attractive design for enhanced aesthetics
- Sure Grip base for increased bonding strength
- 5.5 inch wide base and 4 inch height for more stopping power
- Can be adhesively attached, mechanically fastened or both
- Y-shaped design for more effective collection of snow
- Predrilled holes for quick and easy mechanical fastening

Available for all roofing applications including metal, slate, shingles, and shakes.

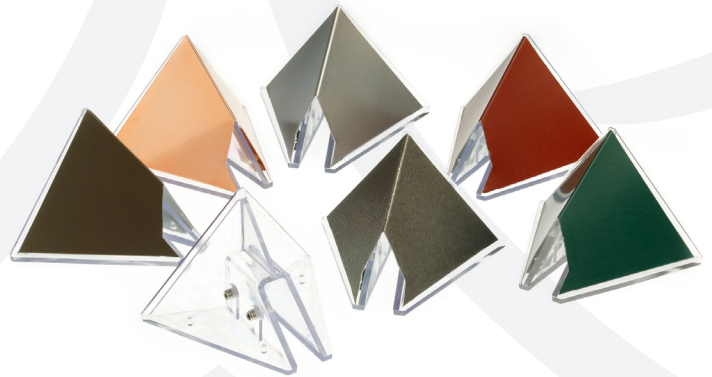

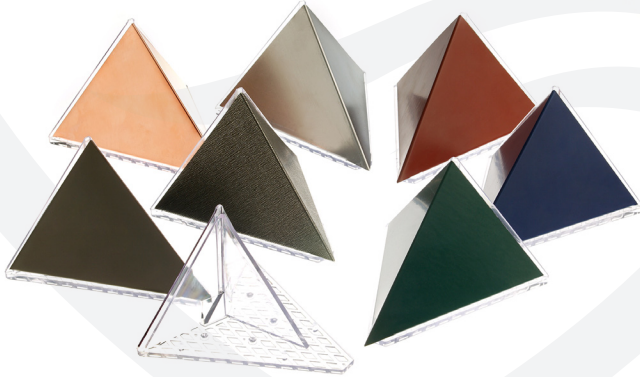

The Rib Guard is designed to attach to standing seam ribs without penetrating the roof panel. This snow guard is attached to the rib using two stainless steel set screws and multiple structural cleats. This “clamp-on” style snow guard helps avoid potential leaks and warranty violations. The Rib Guard is available in two widths to accommodate different standing seam profiles.

The Rib Guard

- Made from durable, virgin grade, UV stabilized polycarbonate
- Clear polycarbonate blends in with the roof
- Attractive design for enhanced aesthetics
- Attaches to standing seam ribs without penetrating the panel
- 5.5 inch wide base and 4 inch height for more stopping power
- Can be attached in any weather
- Y-shaped design for more effective collection of snow
- Uses no adhesives for quick and clean installation

Color Armor™

Exclusively offered by Sno Shield™, Color Armor™ is our patent-pending process of covering a polycarbonate snow guard with an attractive outer shell. Color Armor can be made from virtually any metal roofing material and is applied to the polycarbonate base in one easy step using our unique snap-on lock system.

Color Armor™

- Combines the decorative appeal of metal with the functionality of polycarbonate
- Is made from the same material as the roof
- Matches the roof color and texture exactly
- Ages and wears the same as the roof
- Can be attached adhesively, mechanically, or clamped to the rib
- Lasts as long as the roof
- Will not streak or stain the roof like other weathered metal snow guards

Color Armor is available in any metal roofing color and virtually any metal roofing material including copper, zinc, steel, aluminum, and terne.
